Category	Description	Reviewers Comment	Action Taken
Build	Could you clone from Git and build using the README file?	**The provided README file explained thoroughly the process of building the project, and also provided brief information on the different sections of the application.**	
Legibility	Was the flow sane and were variable names and methods easy to follow? Does the code adhere to general guidelines and code style?	**Yes, I looked through mainly the react code, as that is what I am most familiar with, and it looked like it followed most standard practices.**	
Implementation	Is it shorter/easier/faster/cleaner/safer to write functionally equivalent code? Do you see useful abstractions?	**I am sure there are possible ways to improve the code, but I think the current react code is efficient enough that the marginal benefit of rewriting it is not worth the extra time.**	
Maintainability	Are there unit tests? Should there be? Are the test covering interesting cases? Are they readable?	**I did not see any unit tests for the react code. However, I am not a strong believer in unit tests for react code as I don't really see the benefit in it, so I wouldn't recommend the team spend time on it anyways.**	

Requirements	Does the code fulfill the requirements?	**Yes, the code fulfills the requirements.**	
Other	Are there other things that stand out that can be improved?	**There isn't anything else that is obvious to me that should be improved.**
